

Company Skills Distribution Tracker

Audited: 5 Slack channels

Coverage: Mar 2026 to Jun 15, 2026

Generated: 2026-06-15

TL;DR

- Only **7 skills** have actually been shipped company-wide as installable files. Everything else is either still in feedback or never packaged.
- **9 skills sit in the feedback channel** (#ai-power-users) waiting to ship. Your own Skill Builder and Skill Optimizer are two of them.
- **~55 skills were built and shown off as "wins" but never distributed.** They live on one person's machine. That is the cross-pollination backlog.
- The real gap is not building skills, it is **packaging and shipping** them. The company builds far more than it shares.
- Slack does not record **who installed what**. Best fix: extend claude-stats (already on most machines) to report each machine's installed skills.

7

Shipped company-wide

9

In feedback, not yet shipped

~55

Built, never distributed

5

Channels audited

1. Shipped 2. In feedback 3. Built, not shipped Sources & caveats

SHIPPED

sent to the whole company

IN FEEDBACK

shared with power users only

NOT DISTRIBUTED

built but never packaged

1. Shipped to the company

Packaged and sent for everyone to install (file, zip, or command plus install instructions). These are the rows for your tracker spreadsheet.

SKILL	OWNER	FIRST SENT	CHANNEL	HOW IT WAS SHARED	WHAT IT DOES
Company CLAUDE.md baseline	Anthony	2026-04-15	phase2, phase3	File plus merge prompt (drag in, paste, reopen)	Shared company writing style, tool priorities, and hard rules
Book Retention Quiz	Anthony	2026-04-20	phase2	Skill file attached, "give it to your Claude and modify"	Weekly 5-question book quiz posted to Basecamp, AI grades answers
/insights	Jose	2026-03-31	phase2	Command, run /insights	Reviews your stocks and setup, rates 1 to 10, suggests skills to run
Claude Ready Notification	Devin (shared by Brian)	2026-03-30	phase2	"Highly recommend everyone install"	Notifies you when Claude needs input or is ready for review
Weekly Log	Tessla (base), Anthony (official)	2026-04-21 base, 2026-06-12 official	phase2, then main	Drive SKILL.md, then weekly-log.zip plus full install steps	Friday Wins / Stucks / Priorities drafted from Basecamp, Slack, Gmail; posts to Basecamp
claude-stats	Jose	2026-05-22 (re-shared 2026-06-08)	phase2, phase3, main	claude-stats-skill.zip plus install steps and auto-schedule	Pulls your local Claude usage, writes a row to the company leaderboard sheet every Friday noon
html-it (team)	Anthony	2026-06-12	main	html-it-team-skill.zip, ~4-min guided setup	Say "html it" to turn any content into a shareable hosted HTML page

2. In feedback, not yet shipped

Shared inside #ai-power-users for feedback before a company rollout, but never confirmed sent out. This is the gap to close: finished work that the rest of the company cannot install yet.

SKILL / TOOL	OWNER	DATE SHARED	STATUS
Skill Builder (emazing-skill-builder)	Anthony	2026-05-21	Anthony said "then I'll get it updated and send this out to the company." Not confirmed shipped.
Skill Optimizer (emazing-skill-optimizer)	Anthony	2026-06-11	"Can I get your feedback on the skill optimizer?" Still in feedback.
Claude Backup	Anthony	2026-04-15	Tested with power users, planned for everyone on shared accounts. Not seen shipped.
EG Skills auto-update repo (ship once, update everywhere)	Anthony	2026-06-12	The distribution mechanism itself, in review with Brian.
Granola Meeting Archive	Jose	2026-04-17	Setup guide shared to power users; later surfaced only as a personal win, not a company push.
Note-taking tool	Brian	2026-06-04	Testing with Jose.
OKR 1x1 skill	Brian	2026-04-21	v1 shared for feedback.
Email Skill (with customizable hooks)	Jose	2026-04-16	In development, Brian feedback.
Claude Intel (tracks Claude / Anthropic updates)	Jose	2026-04-12	Built and offered to share, no formal rollout.

3. Built, but never distributed

Roughly 55 individual automations were posted as "wins" across the channels and never packaged for anyone else to install. They run on one person's machine. The highest-reuse candidates:

- **Barcode Label Generator** (/barcodes), EJ. Pulls qty and price, fetches barcodes, outputs a print-ready file.
- **Shopify Test Order Creator**, requested by Jose; Jerome built one. Reusable across all three brands.
- **PO Vendor Email Automation**, Arvhiane. Drafts vendor emails, pulls contacts, CCs buyers, tracks confirmations.
- **Morning Briefing** (daily Basecamp triage page), Jose. Overdue and due-today across columns on one click-through page.
- **Daily Warehouse Location Sync** (Salesforce to ShipStation), Jason. Posts before/after summary daily.
- **Best Deal Extractor and Updater** (Amazon), Karlee. Cuts 2.5 to 3.5 hours per deal to ~10 minutes.
- **Create SKU automation**, Maryanne. End-to-end SKU entry from the product team Slack drop.

This is the cross-pollination opportunity Jose flagged in the 2026-05-28 AI Power Users agenda: find skills shipped in one department that fit others, and recommend installs.

Data sources and caveats

- **Channels audited:** #ai-claude-code-phase2 and #ai-claude-code-phase3 (both archived 2026-05-27), #EG-AI-Lab / main (active), #a-team-department-head-managers (a leadership channel that carries no skill distributions), and the feedback channel #ai-power-users.
- **"Who installed each skill" is not recorded in Slack.** Two ways to get it: (a) follow up with each team member individually, or (b) extend the claude-stats skill, already running on most machines and already writing to the company sheet weekly, to also report each machine's installed-skills list. Recommend (b): automatic, no chasing.
- **Shipped vs built:** a skill counts as "shipped" only when a file, zip, or command was posted with install instructions for everyone. A "win" describing a personal automation does not count, which is why the shipped list is short.

- **Coverage window:** roughly March 2026 through June 15, 2026. Older history predates the skills program.
